TECHNICAL SKILLS

AI & Agentic Systems: Agentic AI, AI Agents, Large Language Models (Claude, OpenAI, Gemini), Retrieval-Augmented Generation (RAG), Vector Databases (Pinecone), Prompt Engineering, Agentic AI Workflows

Automation & Integration: n8n, Make.com, REST APIs, Webhooks, System Integrations (Gmail, Google Sheets, Google Drive)

Cloud & DevOps: AWS (EC2, Lambda, VPC, S3, IAM, ALB, Auto Scaling, NAT Gateway, CloudWatch, Cost Explorer, Boto3), Docker, Kubernetes, CI/CD Principles

Languages & Scripting: Python, Bash Shell Scripting

Fundamentals: Linux (Ubuntu), Git/GitHub (Branch Management, SSH Authentication), Problem-Solving & Logic Building

PROFESSIONAL SUMMARY

Final-year Computer Science student (CGPA 3.43/4.0) with hands-on experience designing and deploying agentic AI systems — building AI agents that combine large language models (Claude, OpenAI, Gemini) with retrieval-augmented generation, vector databases, and automation platforms (n8n, Make.com). Completed a Backend AI Engineering internship at FlyRank AI covering API contracts, prompt design, retrieval and grounding, and AI evaluation and operations. Backed by a solid cloud and DevOps foundation (AWS, Docker, Kubernetes, CI/CD) for integrating and deploying AI solutions reliably. Seeking an Agentic AI Solutions Engineer role to design, build, and deploy production-ready AI agents that solve real business problems.

PROJECTS

AI Voice Agent — Conversational Email Assistant

Tech: n8n, ElevenLabs Conversational AI, OpenAI, Gmail API, Google Sheets API

- Built a voice-enabled AI agent using ElevenLabs Conversational AI integrated with an n8n backend, letting users send emails through natural spoken conversation.
- Designed an LLM-powered agent with tool-calling and short-term memory, orchestrated through n8n's Webhook and Respond-to-Webhook nodes.
- Connected the agent to Google Sheets for contact lookup and Gmail for sending messages, enabling it to complete multi-step tasks from a single voice request.
- Configured the agent's persona, system prompt, and conversation flow to collect recipient and message details before confirming and sending.

Agentic AI Automation Workflows (n8n / Make.com)

Tech: n8n, Make.com, Gemini API, Pinecone, Google Drive API, Email APIs

- Context-Aware RAG Agent (Gemini & Pinecone) — built a retrieval-augmented generation agent pairing the Gemini LLM with a Pinecone vector store for context-aware question answering.
- Email Responder AI Agent — built an AI agent that reads incoming emails and drafts automatic replies.
- Additional workflows: automated web research & LinkedIn posting, AI-based video generation, Google Drive-to-AI-memory ingestion, and shop inventory tracking — demonstrating agent design across varied business use cases.

Cloud Cost Guardian — AWS Real-Time Cost Monitoring & Anomaly Detection *(Final Year Project)*
Tech: Python, AWS (IAM, CloudWatch, Cost Explorer, Boto3), Statistical Anomaly Detection

- Architected a real-time AWS cost-monitoring system that detects anomalous spend spikes and fires automated alerts within 60 seconds of a configurable threshold breach.
- Implemented statistical anomaly detection integrated with AWS IAM and multi-API orchestration for end-to-end cloud cost governance.

Additional Projects: AWS VPC Architecture • Resource Usage Reporting Automation

- Architected a multi-tier AWS VPC with public/private subnets, Application Load Balancer, and Auto Scaling Groups across multiple Availability Zones, enforcing least-privilege security.
- Built a Bash/Python CLI tool using the AWS CLI to query and summarize real-time EC2, S3, and Lambda usage with enterprise-grade error handling.

PROFESSIONAL EXPERIENCE

FlyRank AI | Back-End AI Engineering Intern | Chicago, IL, USA (Remote)
July 2026 – September 2026

- Completed FlyRank's Backend AI Engineering specialization, delivering 10 practical assignments covering API contracts, task design & prompting, retrieval and grounding, and AI evaluation & operations.
- Built "Your 10x Solution" as a culminating project, reviewed and accepted by the program's lead track mentor.
- Collaborated daily with a distributed engineering team to review AI agent outputs and refine prompts, improving the accuracy and consistency of LLM-generated deliverables.
- Completed 4 verified Anthropic Academy courses alongside the internship curriculum.

EDUCATION

Bachelor of Science in Computer Science — University of Peshawar *(see note below on graduation date)*
CGPA: 3.43 / 4.0

Relevant Coursework: Natural Language Processing (NLP), Database Systems, Software Engineering, Operating Systems, Computer Networks, Big Data, Human-Computer Interaction (HCI)

CERTIFICATIONS & TRAINING

- **Anthropic** — Claude 101
- **Anthropic** — Claude Code 101
- **LearnKartS** — Workflow Automation with n8n: Logic, Data & Error Handling
- **Databricks Academy** — Generative AI Fundamentals
- **Databricks Academy** — AI Agent Fundamentals
- **Google** — AI Professional Certificate
- **University of California, Irvine** — Effective Problem-Solving and Decision-Making
- **IBM** — Python for Data Science, AI & Development
- **University of Michigan** — Programming for Everybody (Getting Started with Python)
